PART I Basic Ideas	1
1 Introduction	3
2 Illustrative description	9
2.1 An illustrative example	9
2.2 Solution given by some previous analytic techniques	10
2.2.1 Perturbation method	10
2.2.2 Lyapunov's artificial small parameter method	11
2.2.3 Adomian's decomposition method	11
2.2.4 The δ -expansion method	12
2.3 Homotopy analysis solution	14
2.3.1 Zero-order deformation equation	14
2.3.2 High-order deformation equation	16
2.3.3 Convergence theorem	18
2.3.4 Some fundamental rules	19
2.3.5 Solution expressions	21
2.3.6 The role of the auxiliary parameter \hbar	31
2.3.7 Homotopy-Padé method	38
3 Systematic description	53
3.1 Zero-order deformation equation	53
3.2 High-order deformation equation	55
3.3 Convergence theorem	57
3.4 Fundamental rules	60
3.5 Control of convergence region and rate	62
3.5.1 The \hbar -curve and the valid region of \hbar	63
3.5.2 Homotopy-Padé technique	64
3.6 Further generalization	66
4 Relations to some previous analytic methods	69
4.1 Relation to Adomian's decomposition method	69
4.2 Relation to artificial small parameter method	73
4.3 Relation to δ -expansion method	75
4.4 Unification of nonperturbation methods	78

5	Advantages, limitations, and open questions	79
5.1	Advantages	79
5.2	Limitations	80
5.3	Open questions	81
PART II Applications		83
6	Simple bifurcation of a nonlinear problem	85
6.1	Homotopy analysis solution	86
6.1.1	Zero-order deformation equation	86
6.1.2	High-order deformation equation	88
6.1.3	Convergence theorem	89
6.2	Result analysis	90
7	Multiple solutions of a nonlinear problem	99
7.1	Homotopy analysis solution	100
7.1.1	Zero-order deformation equation	100
7.1.2	High-order deformation equation	101
7.1.3	Convergence theorem	103
7.2	Result analysis	104
8	Nonlinear eigenvalue problem	115
8.1	Homotopy analysis solution	116
8.1.1	Zero-order deformation equation	116
8.1.2	High-order deformation equation	117
8.1.3	Convergence theorem	120
8.2	Result analysis	121
9	Thomas-Fermi atom model	133
9.1	Homotopy analysis solution	133
9.1.1	Asymptotic property	133
9.1.2	Zero-order deformation equation	134
9.1.3	High-order deformation equations	136
9.1.4	Recursive expressions	137
9.1.5	Convergence theorem	138
9.2	Result analysis	140
10	Volterra's population model	149
10.1	Homotopy analysis solution	149
10.1.1	Zero-order deformation equation	149
10.1.2	High-order deformation equation	152
10.1.3	Recursive expression	154
10.1.4	Convergence theorem	155
10.2	Result analysis	156
10.2.1	Choosing a plain initial approximation	156

10.2.2	Choosing the best initial approximation	157
11	Free oscillation systems with odd nonlinearity	165
11.1	Homotopy analysis solution	165
11.1.1	Zero-order deformation equation	165
11.1.2	High-order deformation equation	167
11.2	Illustrative examples	170
11.2.1	Example 11.2.1	170
11.2.2	Example 11.2.2	171
11.2.3	Example 11.2.3	172
11.3	The control of convergence region	173
12	Free oscillation systems with quadratic nonlinearity	179
12.1	Homotopy analysis solution	179
12.1.1	Zero-order deformation equation	179
12.1.2	High-order deformation equation	182
12.2	Illustrative examples	185
12.2.1	Example 12.2.1	185
12.2.2	Example 12.2.2	187
13	Limit cycle in a multidimensional system	197
13.1	Homotopy analysis solution	198
13.1.1	Zero-order deformation equation	198
13.1.2	High-order deformation equation	201
13.1.3	Convergence theorem	204
13.2	Result analysis	205
14	Blasius' viscous flow	217
14.1	Solution expressed by power functions	218
14.1.1	Zero-order deformation equation	218
14.1.2	High-order deformation equation	219
14.1.3	Convergence theorem	220
14.1.4	Result analysis	221
14.2	Solution expressed by exponentials and polynomials	223
14.2.1	Asymptotic property	223
14.2.2	Zero-order deformation equation	224
14.2.3	High-order deformation equation	225
14.2.4	Recursive expressions	225
14.2.5	Convergence theorem	227
14.2.6	Result analysis	228
15	Boundary-layer flows with exponential property	239
15.1	Homotopy analysis solution	241
15.1.1	Zero-order deformation equation	241
15.1.2	High-order deformation equation	242

15.1.3	Recursive formulae	243
15.1.4	Convergence theorem	246
15.2	Result analysis	247
16	Boundary-layer flows with algebraic property	257
16.1	Homotopy analysis solution	257
16.1.1	Asymptotic property	257
16.1.2	Zero-order deformation equation	258
16.1.3	High-order deformation equation	260
16.1.4	Recursive formulations	262
16.1.5	Convergence theorem	263
16.2	Result analysis	265
17	Von Kármán swirling viscous flow	275
17.1	Homotopy analysis solution	276
17.1.1	Zero-order deformation equation	277
17.1.2	High-order deformation equation	280
17.1.3	Convergence theorem	283
17.2	Result analysis	285
18	Nonlinear progressive waves in deep water	295
18.1	Homotopy analysis solution	296
18.1.1	Zero-order deformation equation	296
18.1.2	High-order deformation equation	299
18.2	Result analysis	304
	Bibliography	311
	Index	321
